

### NEW - Automatic Spot Welders from GYS

GYS, the French manufacturer of Car Body Repair equipment has announced the launch of a major advance in functionality in their latest range of Spot Welders named 'Energy Dynamic Control' (EDC) this technology provides fully automatic setting of the machine requiring no parameter input from the operator.

The new proprietary technology (patent pending) will set the spot welding parameters automatically taking account of metal thickness and the resistance variations of high strength metals. Benefits include ease of use but importantly a reduction in the chance of incorrect settings being applied to the weld.

This technology is fitted to the range of GYS C Clamp Spot Welders which carry vehicle manufacturer approvals.

This launch coincides with a change in distribution strategy by GYS, who are now supporting a network of Equipment, Paint and Parts distributors directly from the GYS UK headquarters in Warwick.

GYS manufacture their Spot Welding range in France and are the largest provider of Spot Welding equipment to Bodyshops across Europe and are now expanding their UK operations.

The new automatic (EDC) range is available for demonstration now to Bodyshops who are invited to make contact through their local distributor or by calling GYS on 01926 459 301.

### Interest in Welding Grows

This has always been a good event for GYS, as well as a meeting place for existing German and international customers, we also enjoy visits from new customers.

This year we saw more visitors from the UK and Ireland, in itself this is a good sign that the industry is being positive.

Neil Pulsford - UK Commercial Director said 'GYS are the largest European manufacturer of small welding machines and battery charger equipment and despite many customers looking at sourcing from the Far East we are still able to compete on price but with the advantages of being a local supplier.'

Whilst visitors could see a wide range of GYS products on the stand a key focus was a range of small MMA/Stick welder packages which have high shelf appeal and with welding helmets included offer market leading value.
