

# In Mayenne, the companies GYS and Rapido join forces to develop a battery charger

During and upon return from lockdown, the Mayenne-based companies GYS (Saint-Berthevin) and RAPIDO (Mayenne) worked together to develop an on-board lead and lithium battery charger. A first collaboration that calls for others.

*This is a first collaboration for Rapido (represented by Pierre Rousseau, on the left, and his son Nicolas, in the middle) and GYS (whose CEO is Bruno Bouygues, on the right).*

## But also faster

This charger, named GYSFLASH 18.12 PL-E, is designed and manufactured by GYS. "It's a charger suitable for both lead and lithium batteries", explains Bruno Bouygues, CEO of GYS. It's versatile, but also faster, smarter, less energy consuming..."

## A thousand equipped vehicles

This first collaboration between the two major Mayenne groups will be set up "little by little". There will be GYS chargers on a few thousand vehicles by next year. "Between now and then, Rapido and GYS hope "to be able to carry out other projects together".
